Coding & Solution

Data	30.09.2026
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	5Marks

Coding & Solution:

This section evaluates the quality and completeness of the implemented solution. The project demonstrates a structured data import process using spreadsheet, Import Set, and Transform Map with accurate field mapping and data validation.

Instructions:

1. Ensure your solution is well-structured and follows best practices for the chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all required configuration steps and setup instructions needed to run the project.
4. Attach or link to your project repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	GitHub Project Repository
Programming Language(s)	ServiceNow Configuration / JavaScript
Framework(s) Used	ServiceNow Platform
Key Features Implemented	Spreadsheet Import, Import Set, Transform Map, Field Mapping, Data Validation
Pending / Incomplete Features	None
Setup / Run Instructions	Upload spreadsheet → Create Import Set → Configure Transform Map → Map fields → Run Transform → Verify records in target table

Code Quality Checklist

S.No	Criteria	Status(Yes/No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project is well-structured and the data import process is implemented using Import Sets and Transform Maps. The solution provides accurate field mapping, data validation, and successful record import into the target table.
